Zoom

Video Communications

Easy-to-use, high-definition virtual meetings from your desktop, mobile device or conference room.

Zoom provides seamless and reliable video and web meetings for up to 300 participants for Education, who can join, share and record content using PC, Mac, Linux, Chrome OS, iOS, Android or BlackBerry devices.

Zoom integrates with calendars and learning management systems, using a simple URL "click to call" function. This makes it easy for educators to create virtual classrooms that are accessible across a range of devices.

Guests without accounts can easily join meetings at no cost, making Zoom a game-changing collaboration platform for researchers working with partners in different organisations.

Why Zoom?

- High quality video conferencing that just works: high definition virtual meetings and application/desktop sharing.
- Compatible with multiple devices: free Zoom clients available on iOS, Android, BlackBerry, Chrome OS, Linux, OSX and Windows.
- Webinars: up to 10,000 participants.
- Casy to use: simple interface and "click to join" meetings.
- Training: co-annotation and white-boarding tools.
- Meet with anyone: no need for guest accounts.
- Integrated scheduling: works with your calendaring system and existing work flows.
- Compatible dial-in: voice-only phone and SIP/H323 video conferencing.
- Seamless access: using single-sign-on (SAML2.0) for your institution.
- Developer platform: including integration with learning management systems and hundreds of other apps in the Zoom Marketplace.
- Feature rich: polling, closed caption, breakout rooms, virtual background, reactions, language interpretation.

Key features

- AARNet supported: hosted on AARNet servers, leveraging the ultra-high-bandwidth and low-latency AARNet network. Traffic is on-net for AARNet connected institutions
- Cow data requirement: works well at low bandwidth.
- Record meetings locally or in the cloud: cloud recording saves video/audio/chat files automatically in CloudStor, AARNet's cloud research storage solution.
- Host meetings in Zoom global cloud or on AARNet Zoom servers for Cloudstor integration.
- Zoom Rooms software: put high quality video, audio and web conferencing in any sized room (includes Scheduling Display and Digital Signage at no additional cost).
- Security: Meeting passcode protection, Waiting Room, Lock meetings, host/co-host controls.
- Educational pricing: annual low-cost licensing.
- Zoom has been a huge strategic enabler for transforming our capabilities in the online space. It has given us the flexibility to combine meeting rooms and personal devices into one slick and professional meeting, involving staff traditional video conference rooms, laptops or iPads, and phone dial in users travelling around the country or overseas."

Geoff Lambert - Senior Project Manager, WSU Information Technology and Digital Servicess

About AARNet Cloud Services

AARNet partners with service providers that are willing to customise their offerings to better meet the needs of the research and education community.
