

# Strategic Plan 2018-2022

The AARNet Strategic Plan defines a long-term vision for a globally networked data-sharing ecosystem that accelerates knowledge creation and innovation, reinforces the resilience of AARNet's infrastructure and builds out new capabilities to meet the evolving digital needs of our customers.

We will continue to develop new and innovative products and services to accelerate Australia's participation in teaching, learning and research on a global scale.

ONE TEAM. CREATIVITY. TRUST.

Ensure the long-term provision of cost effective and specialised network services to meet the unique needs of the research and education sector.

Remove barriers to access, sharing, movement and analysis of data for health and medical research, aligned with institutional and government investment priorities.

Facilitate access to data for research regardless of where it is stored, and improve integration of applications, compute and data for solving research problems.

Put customer value at the heart of everything we do, and enable data-driven decision making.

Address cyber security challenges faced by and on behalf of the research and education sector through network-based detection and mitigation.

Add diversity to the network and improve access to affordable broadband services for campuses, study hubs and scientific instruments in regional Australia.
